help to formulate suitable requirements for a still to be developed Fused Event Bulletin.

In the 2005 CTBTO-WMO experiment, twelve participating meteorological centres were tasked to find a hypothetical nuclear event that was chosen randomly to take place on 18 January close to the eastern coastline of New Zealand. Figure 1 on page 19 demonstrates how

WEB-GRAPE created a 'multi-model Field-of-Regard' (MMFOR) based on the data provided during the experiment for the first event detection that was calculated to occur on 21 January at the radionuclide station Kaitaia (RN47), New Zealand. It is worth noting that the maximum number of overlaid 'Fields-of-Regards' (blue box) is located close to the real source location of the hypothetical event (yellow object). ■
