Abstract

The International Training Centre was established at the premises of KNDC in Almaty (Kazakhstan) under financial and methodical support of the Norwegian NORSAR and the Institute of Geophysical Researches of the KNDC. The main aim was to create a regional centre for the processing and interpreted seismic data. The Centre started functioning in 2006 and has since then been visited by specialists from several Central Asian countries. The Centre has provided long term training courses and short term training courses. The training courses have been organized according to the requirements of each country involved.

1. Introduction

The International Training Centre was established at the premises of KNDC in Almaty (Kazakhstan) under financial and methodical support of the Norwegian NORSAR and the Institute of Geophysical Researches of the KNDC. The main aim was to create a regional centre for the processing and interpreting seismic data. The Centre started functioning in 2006 and has since then been visited by specialists from several Central Asian countries. The Centre has provided long term training courses and short term training courses. The training courses have been organized according to the requirements of each country involved.

2. Training Courses

The Centre has provided training courses for specialists from Central Asia countries. The courses have been organized according to the requirements of each country involved. The courses have been conducted in two ways: long term training courses and short term training courses. The long term training courses have been conducted in several countries, while the short term training courses have been conducted in Almaty.

3. Training Programme

The Centre has provided training courses for specialists from Central Asia countries. The courses have been organized according to the requirements of each country involved. The courses have been conducted in two ways: long term training courses and short term training courses. The long term training courses have been conducted in several countries, while the short term training courses have been conducted in Almaty.

4. Conclusion

The Centre has provided training courses for specialists from Central Asia countries. The courses have been organized according to the requirements of each country involved. The courses have been conducted in two ways: long term training courses and short term training courses. The long term training courses have been conducted in several countries, while the short term training courses have been conducted in Almaty.

Acknowledgements

The authors would like to acknowledge the support of NORSAR and the Institute of Geophysical Researches of the KNDC for their contribution to the establishment of the International Training Centre.
