Japan’s Initiative to Promote the Entry into Force of the CTBT

1. Sending Special Envoys to engage with non-signatories of CTBT and non-ratified countries on the Annex II States.
In light of 2010 NPT Review Conference, Japan will send high level envoys to non-signatories of CTBT and non-ratified States of Annex II, to encourage those States to sign and ratify as soon as possible.

2. Contribution to establishing a strong verification regime
   (1) Enhancement of JICA Global Seismological Observation Training
Since 1995, in cooperation with the Japan Meteorological Agency, Japan Weather Association and the Building Research Institute, Japan has been offering Global Seismological Observation Training. To date, one hundred thirty seven (137) experts coming from over sixty nine (69) countries were trained. Japan will enhance this technical training to increase the number of competent technical experts who will play key roles in strengthening the IMS. Details of the training are as follows:
   • Purpose: to increase the number of competent technical experts who will play key roles in strengthening the IMS through knowledge-sharing and offering technical expertise in the area of global earthquake observation and data analysis.
   • Target Countries: Mainly CTBT non-signatories and non-ratified States
   • Requirements: More than three-year-experience in seismology and working in the field of earthquake observation and data analysis. Preference will be given to those who are currently working or are planning to work at the IMS Observatory or the National Data Centres.
   • Training curriculum:
     ➢ Understanding the IMS and its role
     ➢ Learning technical expertise in seismology required for monitoring a nuclear test
     ➢ Learning data analytical skills in identifying nuclear explosions from earthquakes
   The training invites instructors from the Japan Meteorological Agency, Japan Weather Association, and CTBTO Provisional Technical Secretariat. In addition to lectures and demonstrations, the training includes an excursion to IMS stations hosted by Japan and the City of Hiroshima.

(2) Japan will invite officials from non-signatories and non-ratified States to visit facilities of the IMS hosted by Japan and to exchange views in order to enhance the visitor’s understanding on IMS national implementation measures and their importance, and encourage those states to sign and/or ratify the CTBT. Japan will also strengthen its diplomatic efforts to encourage those non-signatories and non-ratified States that are yet to establish IMS stations to build them at the earliest possible date.
Statement by H.E. Mr. Katsuya Okada, Minister for Foreign Affairs of Japan at the 6th Conference on Facilitating the Entry into Force of the CTBT September 24, 2009

Co-Chairs and dear participants,

On behalf of the Japanese Government, I would first like to congratulate the French Foreign Minister Dr. Bernard Kouchner and Moroccan Foreign Minister Dr. Taib Fassi Fihri on their appointment as Chairs for this Conference.

Since the adoption of the Comprehensive Nuclear-Test-Ban-Treaty (CTBT), Japan has consistently appealed for the early entry into force of the CTBT through the medium of General Assembly resolutions on the elimination of nuclear weapons, and has resolutely engaged in encouraging states that have not signed or ratified the Treaty to do so at the earliest possible date. I deeply regret that the CTBT has not yet entered into force. However, this year’s conference, which is being held in the middle of a positive momentum that is being stronger than ever in nuclear disarmament, has particular significance. Japan also highly welcomes the return of the United States after their ten year absence and I am convinced that through this conference we can send a strong message towards the entry into force of the Treaty.

(Relevance of CTBT and Japan’s Position)

Co-Chairs,

Ten years have passed since Japan chaired the first Article XIV Conference. Today, it is no understatement to say that the prohibition of nuclear tests has become a universal value. A nuclear test ban can impede the development of nuclear weapons and thereby prevent the proliferation of nuclear weapons. Moreover, the CTBT is an essential pillar that supports the NPT regime and a realistic and practical approach to realize a “world without nuclear weapons”.

At this opportunity, I would like to call upon leaders of the nine Annex 2 states that have yet to ratify the CTBT to act decisively to sign and ratify the CTBT at the earliest possible date. I also call upon all states to continue their adherence to nuclear-test moratorium.

(Nuclear test conducted by the DPRK)

Co-Chairs,

Under these circumstances, the DPRK nevertheless conducted a nuclear test in May this year. This went against the global public opinion calling for a “world without
nuclear weapons.” Japan considers the DPRK’s nuclear test as a grave threat to international peace and security and again, strongly condemns the DPRK for its act. Security Council resolution 1874 calls upon the DPRK to join the CTBT at the earliest date and we strongly urge the DPRK to comply with Security Council resolutions, and to fully implement the agreements reached at the Six Party Talks.

The DPRK’s nuclear test can only confirm the urgent need for the Treaty to enter into force.

(Next task: Japan’s initiative to promote the entry into force)

Co-Chairs,

Japan highly welcomes the positive attitude towards CTBT ratification demonstrated by President Obama of the United States.

Today I would like to introduce “Japan’s initiative to promote the entry into force of the CTBT” in order to make this momentum sustainable.

First, Japan will intensify its efforts to engage with Annex 2 states that have not yet signed or ratified the Treaty by taking every opportunity, including meetings between heads of states. In particular, in view of the 2010 NPT Review Conference, we plan to send special high level envoys to persuade these states that have not ratified to do so at the earliest possible date. In this context, I would like to propose that the French and Moroccan Foreign Ministers acting as Co-Chairs of this conference actively engage with non-signatories and states that are yet to ratify the CTBT, to ensure that the joint message to be issued by the conference is clearly communicated to these countries.

Second, Japan promises to continue its cooperation with the Provisional Technical Secretariat (PTS) from both the financial and technical point of view. The verification system is a life-line and in anticipation of the CTBT’s entry into force, we must accelerate our efforts to advance the establishment of the International Monitoring System (IMS).

Third, Japan will cooperate with states concerned in the area of maintenance of IMS facilities by enhancing its current invitation programme for training seismological experts to monitor nuclear tests. Japan will also encourage those states that have not yet installed IMS stations under the Treaty to do so as soon as possible.

(Japan’s commitment)

To conclude, Japan will strengthen its close cooperation with the international community towards the early entry into force of the CTBT. What is now required is for the international community as a whole to consolidate its efforts in advancing the global
momentum towards the entry into force of the CTBT. And I hereby reiterate that Japan will take the lead in this endeavour.

Thank you.
